Introduction

This report presents the results of functional testing conducted on the TrackServ system. The purpose of the testing was to identify defects that affect the system's functionality, usability, and reliability before deployment. During testing, various modules of the application were evaluated, including authentication, user interface components, community features, reporting, search functionality, maps, user profiles, and scheduling. The identified issues have been documented with their descriptions, priorities, and current statuses to assist the development team in resolving them efficiently.

Bug Sum

BUG-01-Pipeline Crash

Features: Pipeline

Description

The application crashes when users refresh a web page

Steps to Reproduce

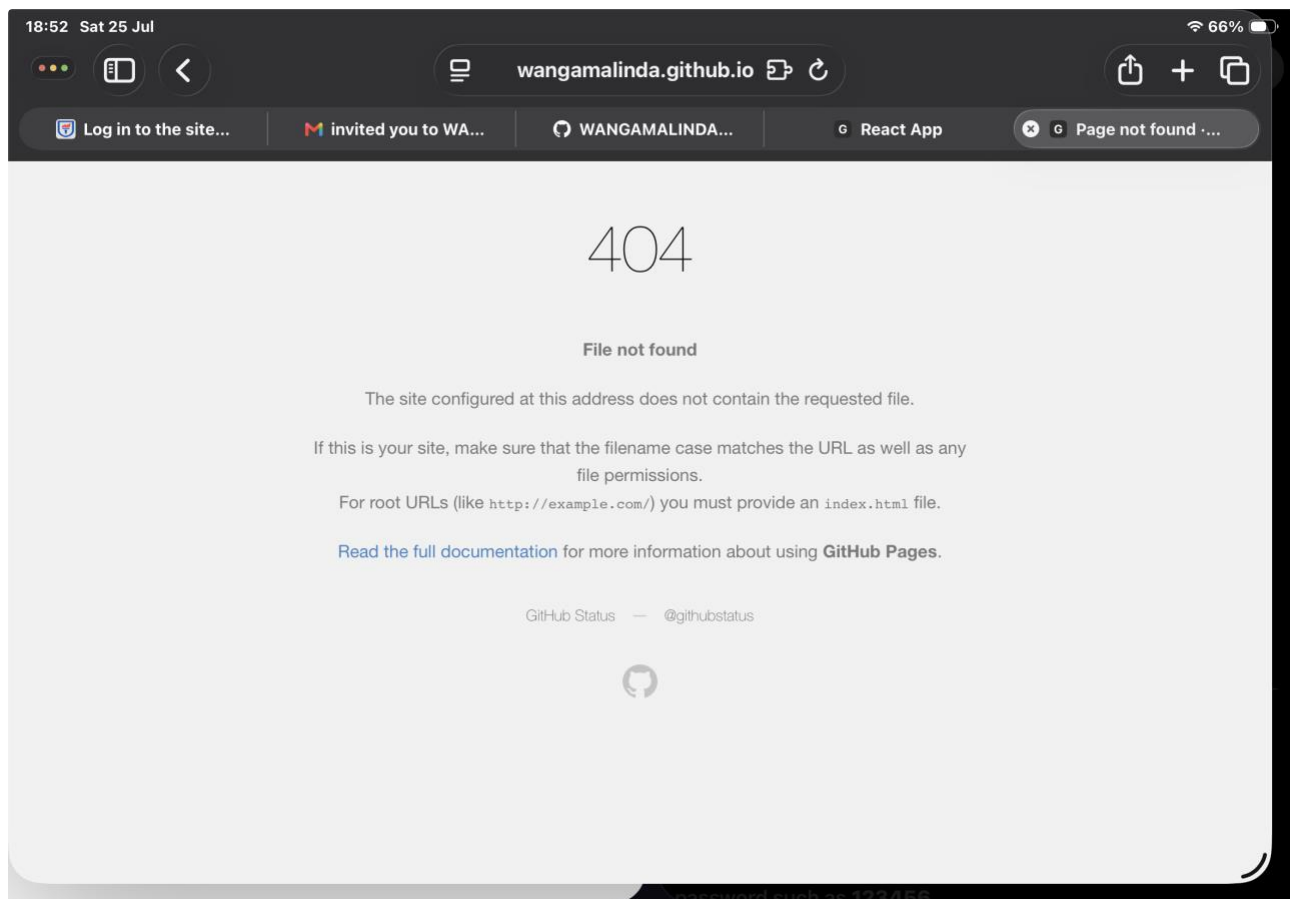

1. Open the application.
2. Navigate to any page.
3. Refresh the page.

Expected Result

The page should reload successfully

Actual result

The application crashes after refreshing

Priority:Low

Status: ignore for now

Assigned to: developer

BUG-02-Weak password Policy

Feature: Authentication

Description

The system allows users to create an account using a weak password such as 123456

Steps to Reproduce

1. Open the registration page.
2. Enter valid user information
3. Enter password 123456 as the password
4. Submit the registration form.

Expected Result

The system should reject weak password and require a stronger password.

Actual Result

The account is created successfully

Priority: High

Status:open

Assigned to:Developer

BUG-03-Top Issue category Colours

Features: User Interface

Description

The top issue categories use the same colour, making them difficult to distinguish.

Steps to Reproduce

1. Open the dashboard.
2. View the Top Issue Categories section

Expected Result

Each category should have a distinct colour.

Actual result

Multiple categories use the same colour.

Priority: Low

Status:Closed(resolved)

Assigned to: UI Developer

BUG-04-Map Does Not Expand

Feature: Map

Description

The map does not expand.

Steps to Reproduce

1. Open the map
2. Tap on the map

Expected Results

The map should expand zoom in and zoom out

Priority: Medium

Status:Closed(resolved)

Assigned to: Frontend Developer

BUG-05-Footer links Does Not Work

Feature: Footer

Description

Footer links do not respond when clicked.

Steps to Reproduce

1. Scroll to the bottom of the page.
2. Clicked any footer link

Expected Result

The select page should open

Actual Result

Nothing happens

Priority: Medium

Status: Open

Assigned to: Frontend Developers

BUG-06–Report Button Not Working

Feature:Report

Description

The report button does not respond when clicked.

Steps to Reproduce

1. Navigate to the home page
2. Click the report button.

Expected results

The reporting form should open

Actual Result

No action occurs

Priority: High

Status:closed(resolved)

Assigned to: Developer

BUG-08-Share Button Not Responding

Feature: Community Post

Description

The share button on the community post does not respond.

Steps to Reproduce

1. Open a community post.
2. Click the share button.

Expected Result

Sharing option should appear

Actual Result

Nothing happens.

Priority:Low

Status:open

Assigned to: Developer

BUG-10-Search Location Returns 404 Error

Feature: Search Location

Description: Clicking the GO button returns a 404 error instead of search for Location.

Steps to Reproduce

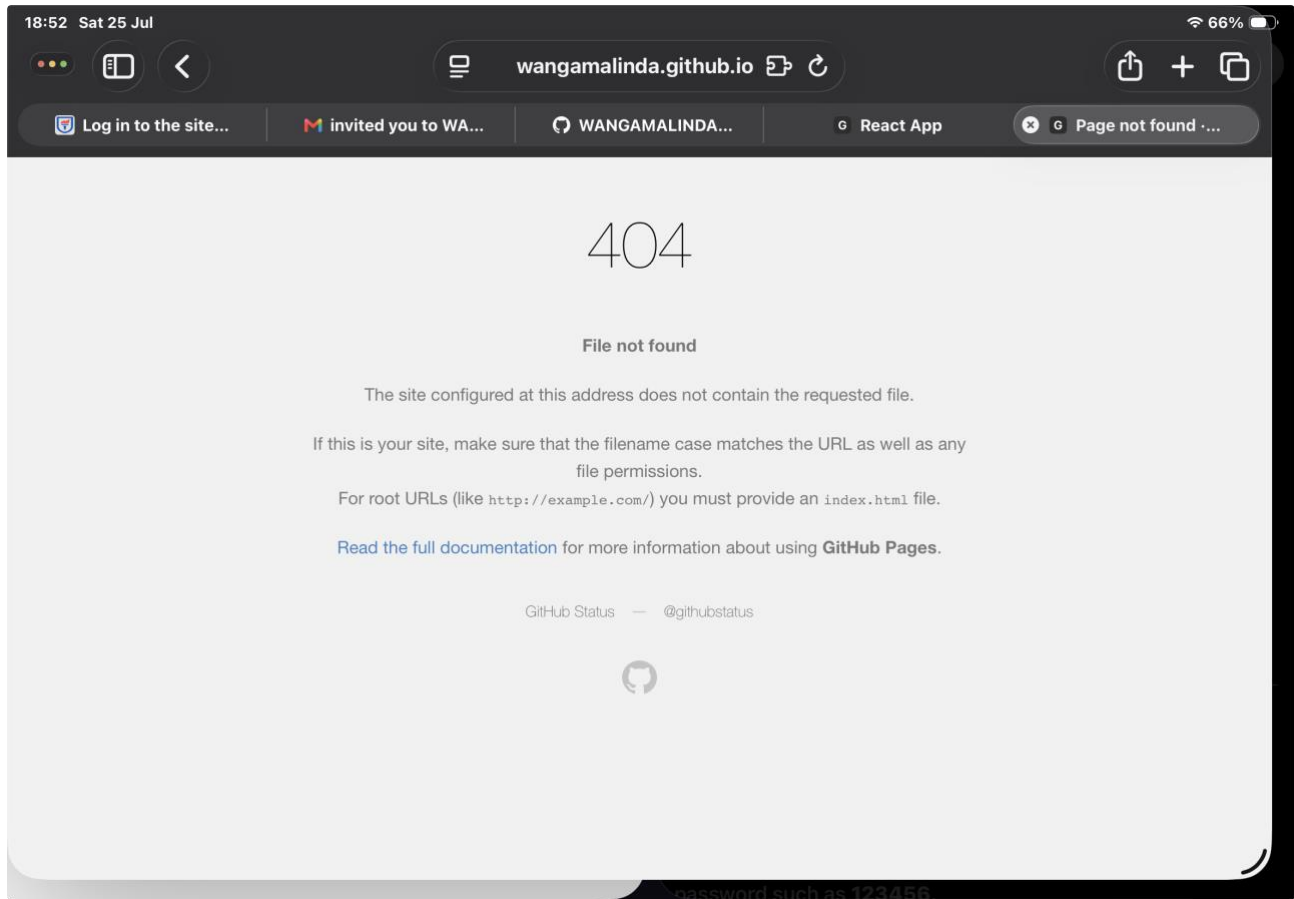

1. Open search Location.
2. Enter a location
3. Click GO.

Expected Result

Search results should be displayed

Actual Result

A 404 page display

BUG-11-Three-Dot Menu not Interactive

Feature: community post

Description

After creating a community post, the delete option works, but the three-dot menu does not respond.

Steps to Reproduce

1. Create a community post.
2. Clicking the three-dot menu.

Expected result

The menu does not respond.

Priority: Low

Status:Open

Assigned to: Developer

BUG-12-My Report Opens Blank Page

Feature: User Profile

Description

Selecting My Reports from the user profile opens a blank page.

Steps to Reproduce

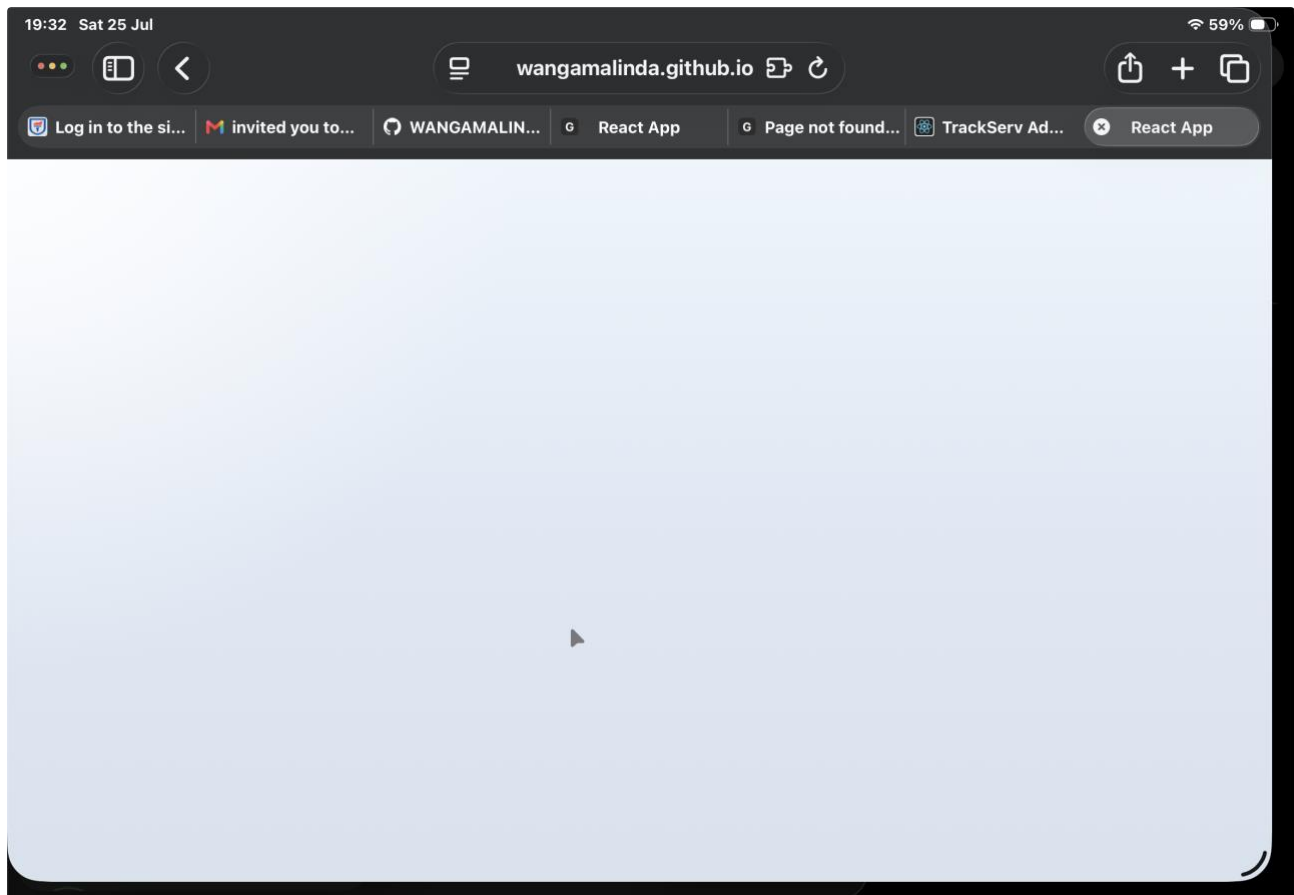

1. Open your profile
2. Select My Reports

Expected Result

The user's report should be displayed.

Actual Result

A blank page appears.

Priority: Low

Status: Open

Assigned to: Developer

BUG-13-Past date be Scheduled

Featured: Schedule visit

Description

The schedule features allow admin to create visits using dates that have been already passed

1.open to community

2. Select event

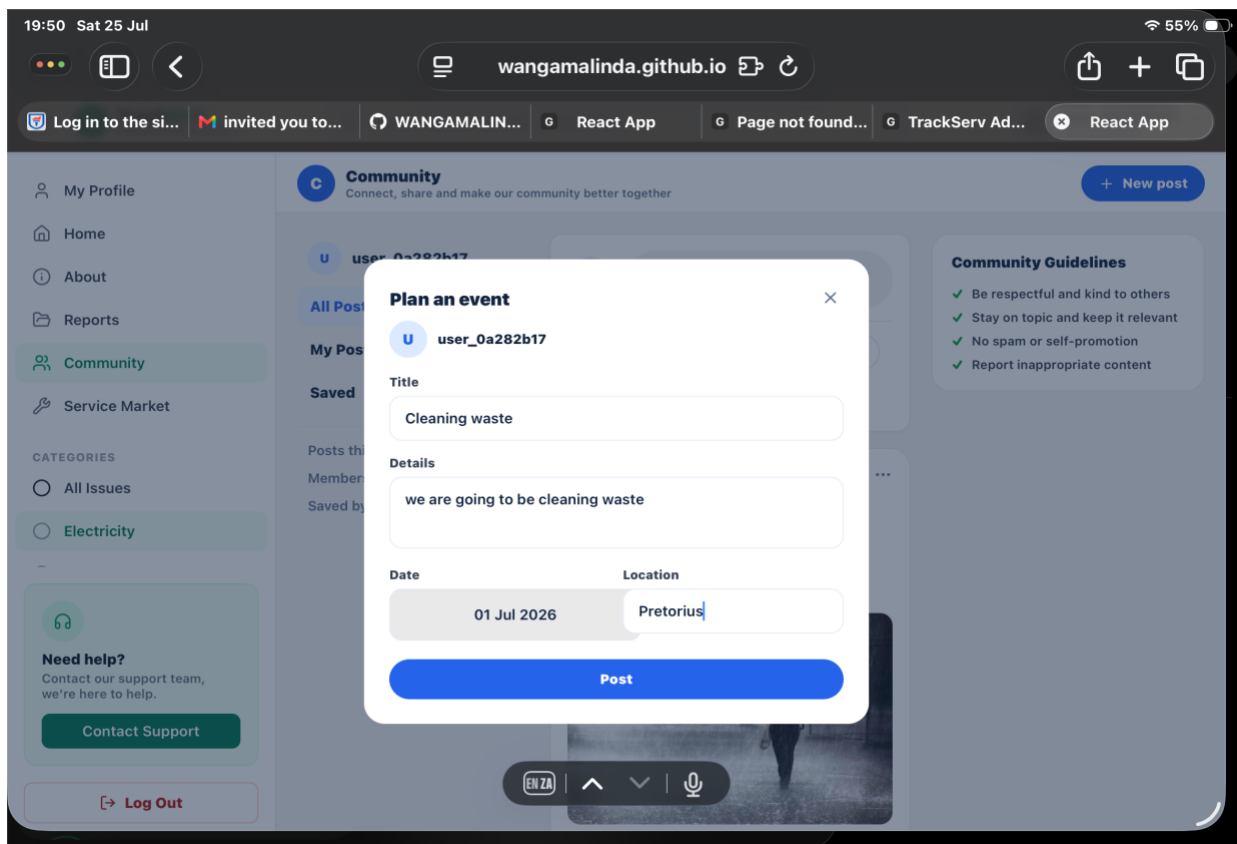

3. Submit the schedule.

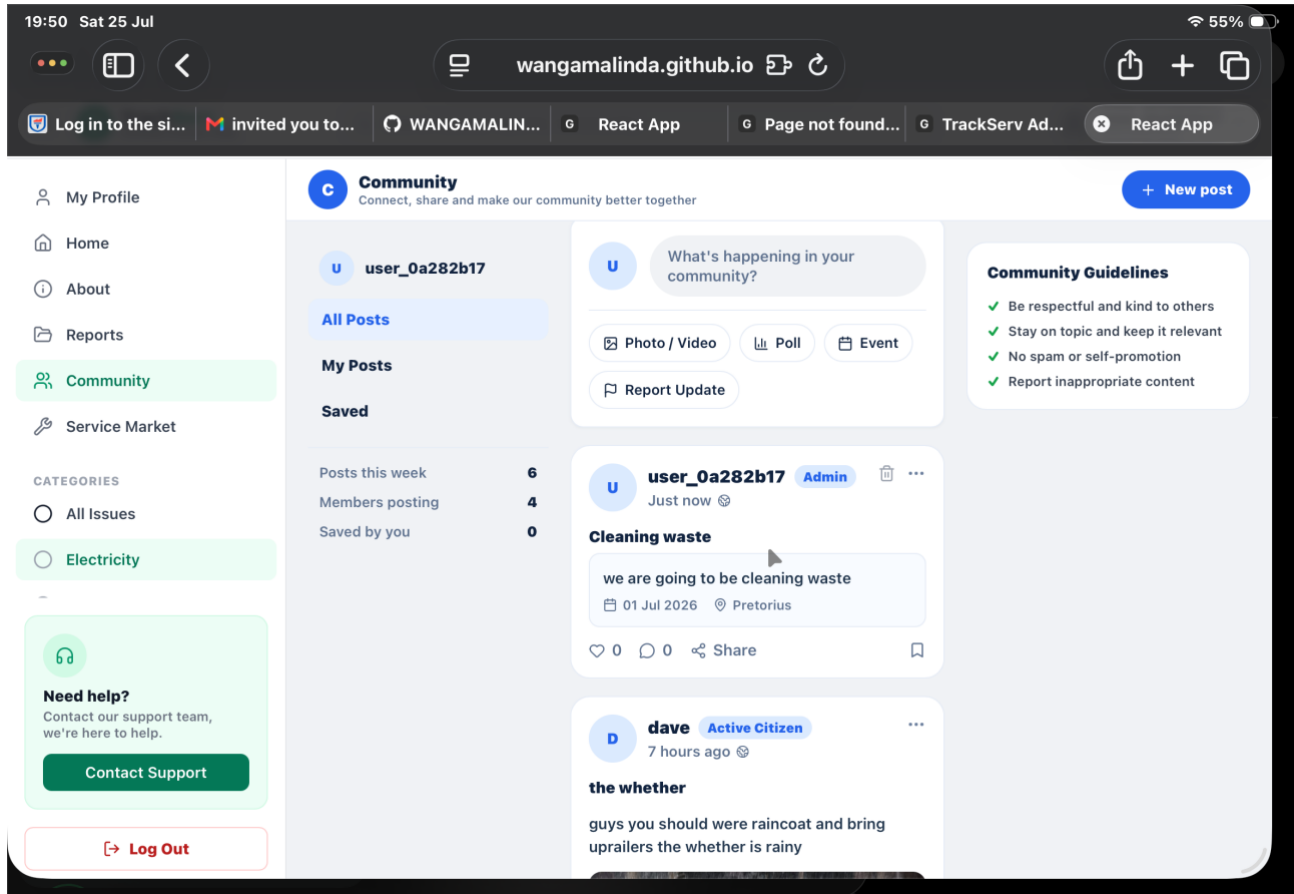

Expected result

The system should reject past dates and display a validation message

Actual Result

The schedule is accepted

Priority:medium

Status:open

Assigned to:Developer

Conclusion

The testing process identified several issues of varying severity across different modules of the TrackServ system. While some defects have already been resolved, others remain open and require attention before the system is released. High-priority issues, such as the weak password policy, should be addressed first because they may affect the security and overall user experience. Resolving the remaining bugs and conducting regression testing afterwards will help improve the stability, reliability, and quality of the application
